

LEACH PITS: Solutions for poor draining soil

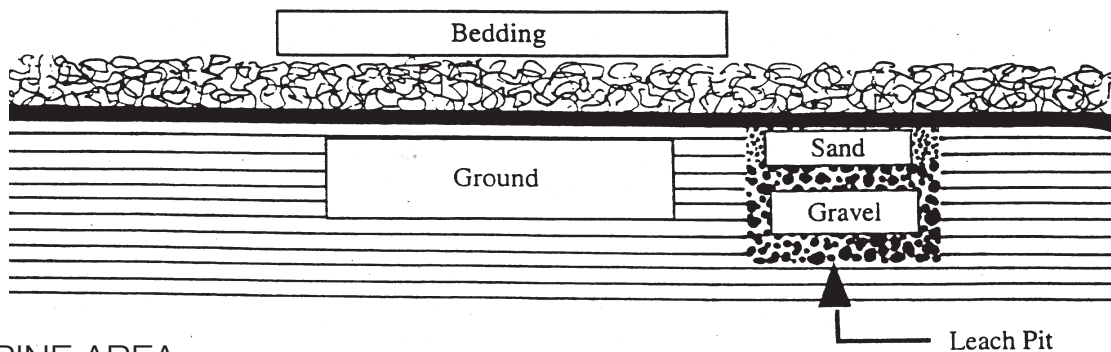

For Horses That Urinate Everywhere

IN THE CENTER OF THE STALL:

1. Dig 2-3 foot diameter leach pit 2 feet deep. Fill with gravel. Top pit with 2 inches of coarse sand or crushed rock.
2. Level floor with coarse sand.
3. Install your Stall Skin as per your instruction guide.

For Horses That Urinate in One Place (God bless them)

AT URINE AREA:

1. Dig 2-3 foot diameter leach pit 2 feet deep. Fill with gravel. Top pit with 2 inches of coarse sand or crushed rock.
2. Install your Stall Skin as per your instruction guide.

TIP:

- Mix Pinesol and water in a 1.5 liter container and squirt over leach pit occasionally to disinfect and deodorize.
